

Connect your iPhone and iPad with Personal Hotspot

December 16, 2012 Rob iPad Transfer, iPhone Transfer, 0

Personal Hotspot refers to the Internet-sharing feature on iPhone 3GS or later* and iPad (3rd generation) Wi-Fi + Cellular. When there is no Wi-fi network available, you can still use the Wi-fi transfer app as long as you have the Personal Hotspot enabled.

Personal hotspot allows you to connect several devices with personal hotspot, including your iPad, laptop, MacBook Air, Macbook Pro etc.

1. Launch the Settings App from the Home Screen of your iPhone.
2. In Settings tap on Personal Hotspot

3. Toggle Personal Hotspot to "On"

4. You can set a password for the personal hotspot

Now let's go to the iPad and join the hotspot from there. We can join the personal hotspot which we have just setup on the iPhone from any another iOS device.

5. On your iPad, launch Settings

6. Tap WLAN in the sidebar

7. Select your iPhone name under Choose a Network...

8. Enter the Wi-Fi Password shown on your iPhone.

When your iPhone and iPad are connected in the same local wireless network created by the personal hotspot, you can run the Wi-Fi Transfer App for iOS on them and send over your photos and videos wirelessly.
