## Directly Transfer Files Between iOS Devices That are on the Same Wi-Fi Network

November 26, 2012 Rob iOS 0

Are you an iPhone owner with friends who also have an iPhone? If yes, then there must have been many times where you wished to be able to quickly get photo and video files from their phone to yours (or vice versa). Here to make that possible is an iOS app called Wi-Fi Transfer App.

Wi-Fi Transfer App is an easy to use application for iOS devices. The app is compatible with iPhone, iPod Touch, and iPad devices that are running iOS 4.3 or later. The app basically makes it easier to transfer photo and video files between iOS devices. The app requires your iOS devices to be connected to the same Wi-Fi network. You can then use the app's friendly interface to send files from one iPad to another iPad, from one iPhone directly to another iPhone, from iPhone to iPad or vice versa.

Direct Hotspot connections for photo and video sharing are also supported. This feature helps you wirelessly connect iOS devices and send over files on the go.

Main Features:

- ◆ A user-friendly phone app.
- ◆ Compatible with iOS devices, iPhone, iPad and iPod touch.
- ◆ Send photo and video files directly from one iOS device to another.
- ◆ Works through Wi-Fi and Hotspot.
